ENCYCLOPEDIA OF HOMOSEXUALITY
Edited by Wayne R. Dynes

This definitive reference work is the first to interrelate and synthesize the outpouring of controversial and often contradictory information on all aspects of male and female homosexuality and bisexuality. Over 770 articles by 84 noted experts cover a broad range of topics. The Encyclopedia is cross-cultural—it covers Asia, Latin America, and the Pacific as well as Western culture. It also stretches across time, from pre-literate peoples to the present day. The coverage is interdisciplinary, encompassing literature, the arts, religion, science, law, philosophy, society, history, psychology, and more—the entire range of human activity and endeavor. A comprehensive 65-page index of some 5,000 entries allows quick access to all major topics.
